DevOps Engineer / System Administrator

[Apply Now](#)

Company: Maviance

Location: Douala

Category: computer-and-mathematical

Maviance PLC is a fast-growing digital financial service provider and technology consulting company. Maviance PLC is part of the Maviance Group which consists of sister companies in Germany, France and the UK. Maviance Group is specialized in delivering customized solutions and value-added services as well as industry specific web and mobile solutions for telecom, utilities and financial institutions, businesses and governments, with a key focus in emerging economies

Maviance PLC is a digital financial services provider that develops, operates and grows a technological platform that focuses on increasing and facilitating access to digital financial services (including bill & payment aggregation, retail payments, agent banking, corporate & bulk payments) to people, companies and government entities of all income level across Cameroon.

Maviance PLC is engaging in its expansion phase in Cameroon and within the CEMAC (Central African) region with the goal of establishing the company as the #1 leading player in the Fintech and Digital Financial space.

We are seeking a highly motivated DevOps Engineer / System Administrator to join our expanding team. You will play a crucial role in maintaining, optimizing, and improving our infrastructure and systems.

We are looking for a candidate with a strong technical background and experience in DevOps and system administration. You should have a good understanding of cloud infrastructure, containers, networking principles, and scripting languages. The ability to work independently and collaboratively in a fast-paced environment is essential.

In this role, you will be responsible for:

Managing and administering our cloud infrastructure, monitoring systems, and networking components

Ensuring the security and availability of our services and systems

Monitor system performance and availability

Design and implement scalable solutions

Implement, maintain and continuously improve automation tools for system provisioning and deployment

Collaborating with development teams to design and implement scalable solutions

Identify and resolve infrastructure and system issues

Ensure security and compliance of systems

Requirements

Qualifications and Experience:

Bachelor's degree in Computer Science, Information Technology, or a related field

2+ years of experience in DevOps or system administration

Strong experience with Containers and Container Orchestration Tools (e.g. Swarm, k8s, nomad)

Experience with automation tools (e.g., Ansible, Jenkins, Terraform)

Proficiency in scripting languages (e.g., Python, Bash)

Knowledge of networking principles and protocols

Understanding of security best practices

Ability to troubleshoot and resolve system issues

Excellent communication and collaboration skills

Ability to work independently and within a team

Experience with microservices architecture.

Familiarity with log management and monitoring tools (e.g Kibana).

Nice to Have:

Knowledge of Standard API Gateway solutions (e.g Kong, Tyk, Apigee)

Knowledge of cloud infrastructure (AWS, Azure, etc.)

Strong communication and collaboration skills.

Familiarity with Agile methodologies

Benefits

We are offering you an exciting and promising opportunity.

Competitive salary

Fast paced and dynamic environment, where you can make an impact

Opportunity to work with leading technologies

Growing global organization with a highly entrepreneurial spirit
